

Circular Details

Requirements Education Bachelor of Science (BSc) in Computer Science & Engineering Experience At least 3 years The applicants should have experience in the following business area(s):
Software Company, IT Enabled Service Additional Requirements Age 26 to 40 years

We are looking for developers who have solid past experience both in CodeIgniter (at least version 2.x) and PHP Laravel with VueJS (API and backend development).

Strong understanding of PHP programming concepts and experience building web applications.

Application deployment experience in Live server using Git, CI/CD Pipeline.

Solid understanding of relational database concepts and experience with database management systems (e.g., MySQL, PostgreSQL) in designing/modifying database.

Proficiency in front-end technologies (HTML5, CSS3, VueJs, Angular/React).

Experience with version control systems such as Git.

Proven problem-solving and troubleshooting skills in emergency situations.

Ability to work both independently and collaboratively in a fast-paced environment.

The candidate needs to have a clean background, as our candidate needs to go through various security clearance checks by government agencies before getting recruited.

Needs to have fluency in English (reading, writing, and speaking), which will prevent candidates from making any spelling or grammatical errors while writing codes for web applications.

You need to have an NOC from all previous organizations and an experience certificate to validate work experience and clearance for joining with us.

We hire for a minimum of 1 year, so you can only apply if you agree with this term. (This is a mandatory term for us to serve our clients better).

You need to sign an NDA with us and provide consent to submit your data to various law enforcement agency to get security clearance.

Responsibilities & Context

Perky Rabbit is a technology company established in 2016. We provide services in software development, IT supply, web/app platform development, hardware design and solutions, digital marketing, and media production. We are currently working on PaaS ("Product as a Service") and SaaS ("Software as a Service").

We primarily provide services to government agencies, e.g., Bangladesh Fire Service and Civil Defence, Bangladesh Police, Bangladesh Ansar VDP, Local Government Division, Ministry of Primary and Mass Education, etc. We also provided services to the Korea International Cooperation Agency (KOICA), the International Labor Organization (ILO), the United Nations Agency, etc. We've also worked with many

international and local brands in Bangladesh, the United States of America, India, Germany, South Korea, and so many more.

We are a technology company with a mid-sized team of professionals that aims to provide technology services to various organizations at a lower rate compared to other organizations.

We believe our valued employees and team members are the key to our success and future. You are welcome to join our team if you want to face and win challenges with us.

We are seeking two talented and motivated PHP developers to join our existing PHP Engineer's team. Your role will be in building, migrating, upgrading, and maintaining some of our web applications developed in Laravel with Vue.js and CodeIgniter.

Develop and maintain web applications using a modern PHP framework (Laravel and CodeIgniter).

Build efficient, testable, and reusable PHP modules.

Integrating our front-end UI with the constructed API.

Solve complex performance problems and architectural challenges.

Developing front-end website architecture.

Developing back-end website applications.

Migrate or upgrade web applications from CodeIgniter to PHP Laravel.

Design, implement, and optimize relational databases (e.g., MySQL, PostgreSQL).

Collaborate with cross-functional teams to gather and define requirements.

Create responsive and visually appealing user interfaces using HTML5, CSS3, and JavaScript (basic understanding is sufficient).

Ensure the performance, security, and scalability of applications.

Maintain, bug fix, and update the web application, which consists of PWA, SSR, etc.

Visit client premises for emergency bug fixing, deployment, and maintenance support.
